

Model evaluation through AeroCom

Michael Schulz

Jan Griesfeller, Stefan Kinne

AeroCom platform

AeroCom

AeroCom server at LSCE:

- ~ 50 model simulations (AeroCom A,B,PRE, HTAP, EUCAARI, GEMS)
original files and renamed,harmonized files
- ~ 25 user accounts
- ~ linux, nco, idl, cdo, ncview, emacs
- ~ CALIOP model/data idl visualization tool 2006/2007
- ~ dods server
- ~ aerocom idl image & analysis software package (=> image catalogue)
(read model+obs+plot+analyse)

Observations:

MODIS, MISR, POLDER, TOMS, AVHRR, AIRS, EMEP, IMPROVE,
EARLINET+ARMS 2000+2001, Aeronet+2003 SKYNET/GAW
AEROCE

Emissions:

AeroCom B

Hindcast Diehl – collection (=>copy on dods server)

Introduction into AeroCom Zoo

SURFOBS Interface!!

Project Selection

Type of diagnostic

Score tables

Filter/Region/Station

Subset stations

Web interface visits, last weeks

Surfobs comparison web interface // 84 visits since 10 Sep

Aerocom work 2d fields web interface // 121 visits since 25 Sep

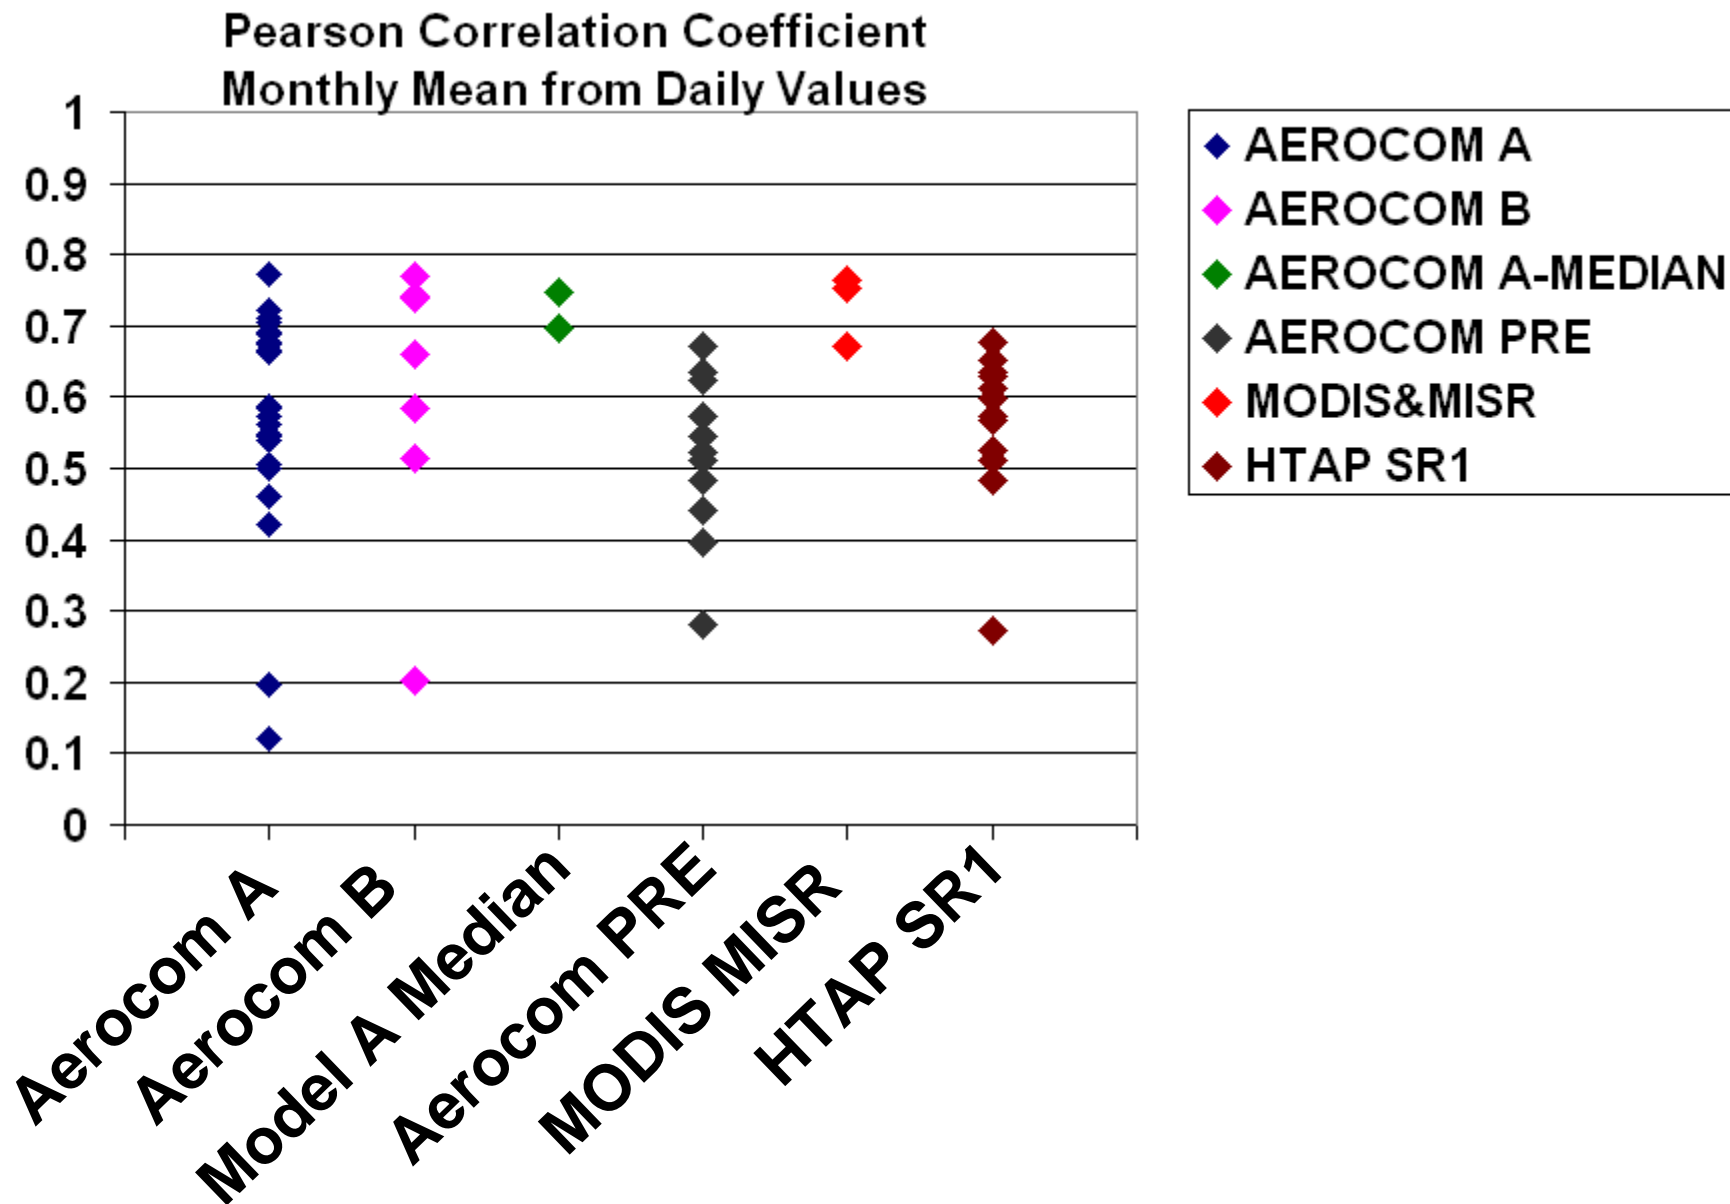

What we can do with scoring

- Show model progress
- Find systematic errors within/across models
- Complement traditional publishing
- Get credit
- Check impact of new parameterisation
- Identify models fit for purpose

Aerosol Optical Depth

Models compared to Aeronet (2001 # 721 / 2000 # 606)

AeroCom

| | Reanalysis | Forecast | Aeronet |
|-------------|------------|----------|---------|
| Mean AOD | 0.242 | 0.218 | 0.215 |
| Correlation | 0.86 | 0.71 | |
| RMS | 0.093 | 0.123 | |
| Std Mod/Obs | 0.79 | 0.75 | |
| Month Bias | 32% | 39% | |

*Based on # 1280 monthly means in 2003
from worldwide Aeronet network
no mountain sites*

ECMWF IFS Model --- Evaluation with Aeronet sun photometers

Dust aerosols (autumn OND, Sahel)

**ECMWF Reanalysis
Modis AOD assimilation**

ECMWF forecast 00h

Against Aeronet sun photometer AOD obs

MEAN HTAP models score:

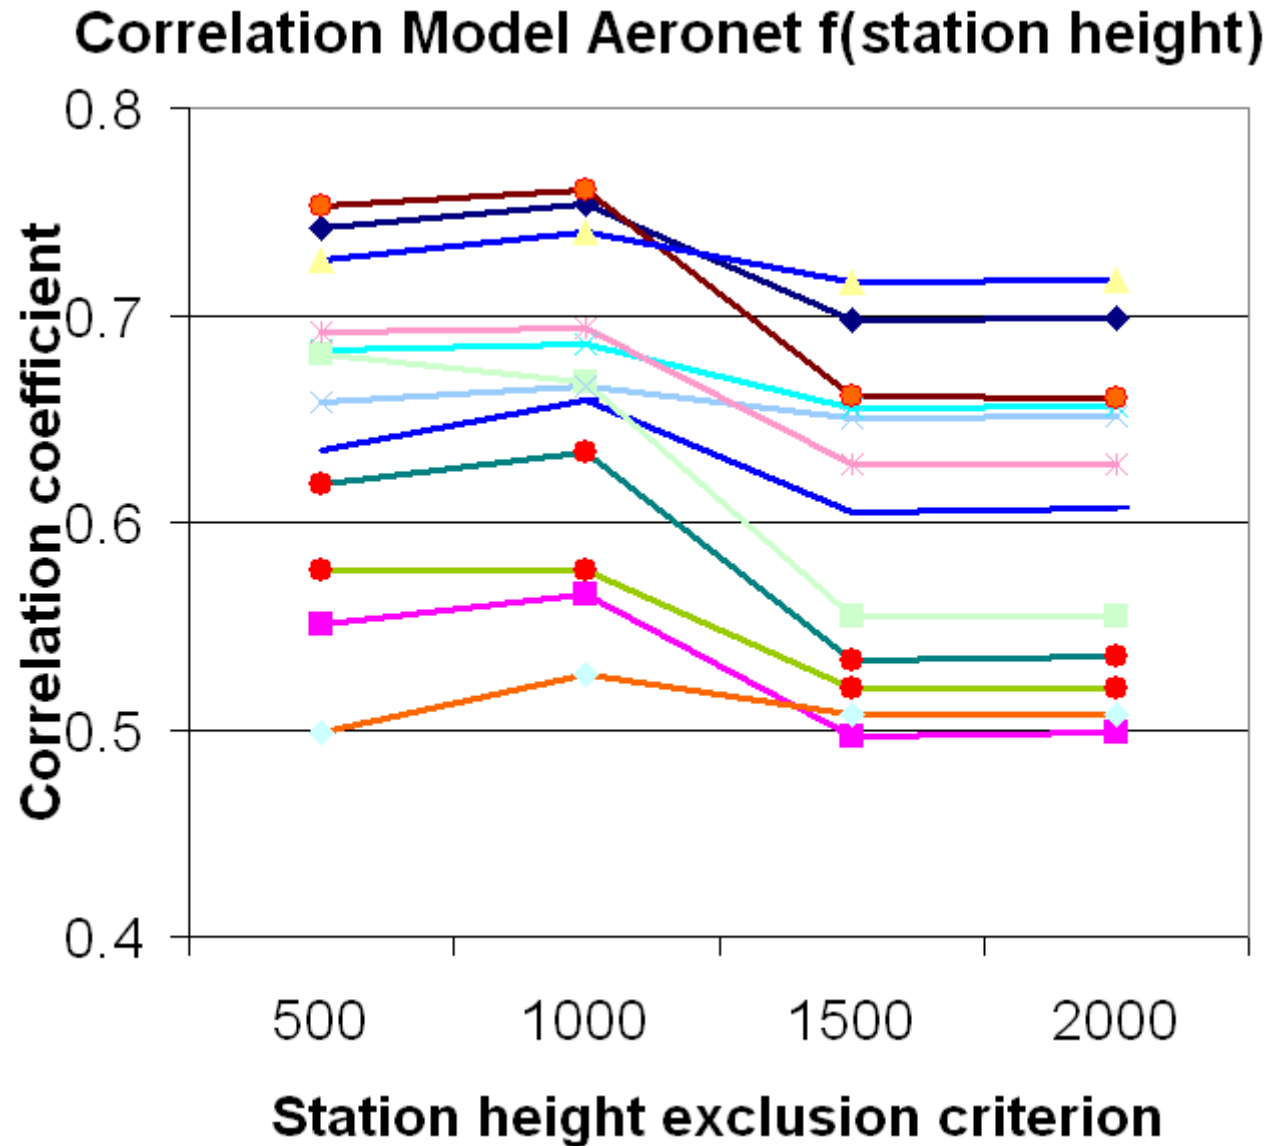

Does correlation improve when we add up wet deposition of SO₂ and SO₄ ??

HTAP

| | EUROPE WET_SO4 2001 HTAP SR1 | EUROPE WET_SO4+SO2 2001 HTAP SR1 |
|--------------------------------------|--|--|
| # of valid observations: | 780 | 780 |
| MODEL mean | 0.68 | 1.14 |
| OBS mean | 0.44 | 0.44 |
| RMS error | 1.15 | 1.43 |
| Mean relative bias per month | 164% | 225% |
| STDDEV(Model)/STDDEV(Aeronet): | 0.869 | 1.202 |
| Correlation of Monthly station means | 0.244 | 0.246 |
| Spearman Rank Correlation monthly | 0.334 | 0.348 |
| Correlation of Yearly station means | 0.491 | 0.492 |
| Correlation of monthly anomalies | 0.844 | 0.754 |
| Taylor Score | 0.444 | 0.493 |

Give subsets of the stations the same answer ?
OD550_AER

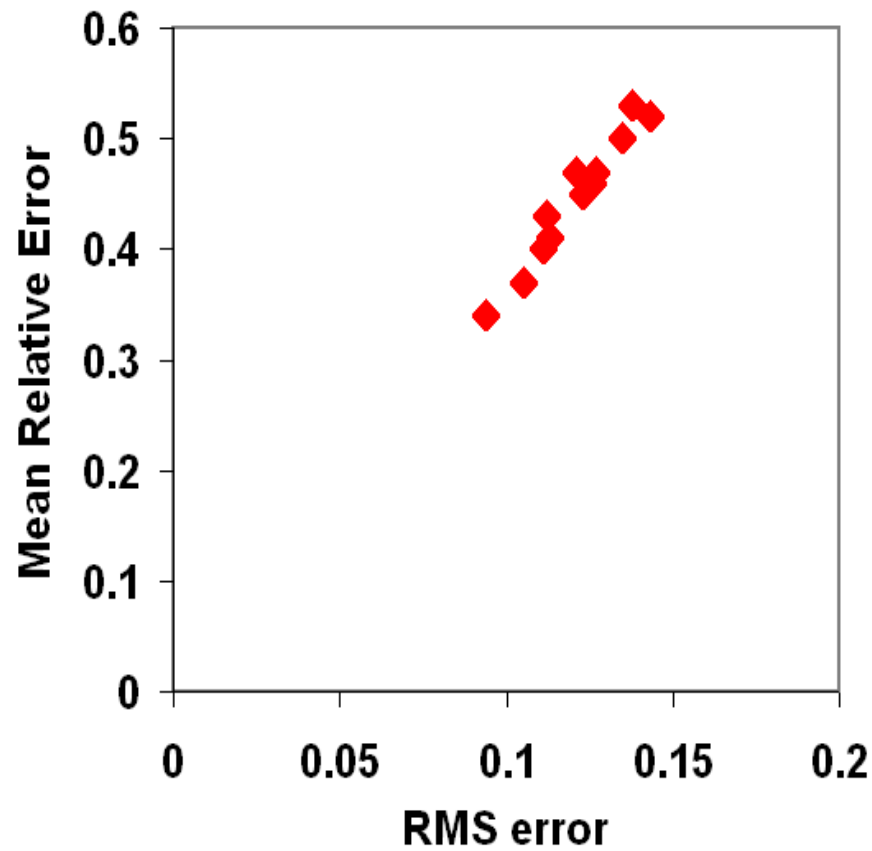

Give subsets of the stations the same answer ? Angstroem Component

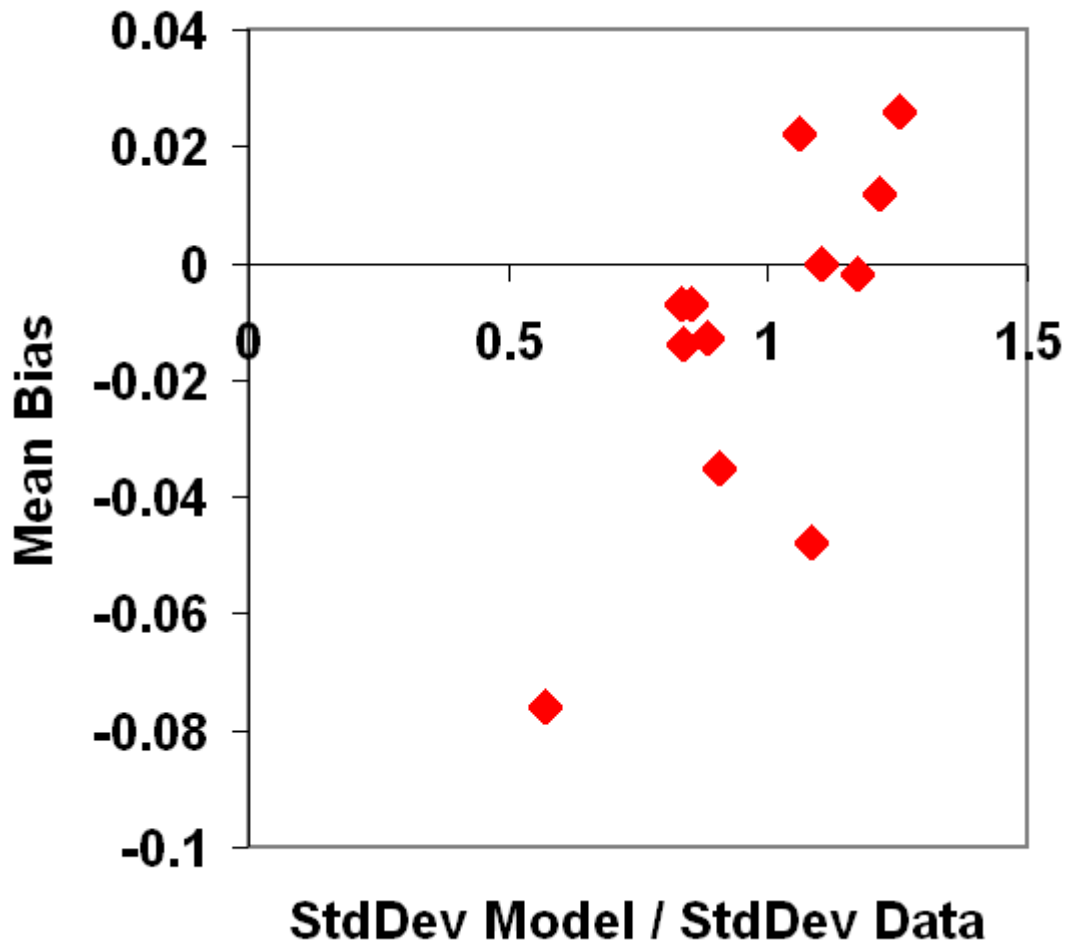

Which statistics provide new information on quality of a model ??

AeroCom A models versus Aeronet OD550_AER

Which statistics provide new information on quality of a model ??

AeroCom A models versus Aeronet OD550_AER

Individual Model Versus Median Model Versus other models

Biomass burning aerosol

Angstroem Component

AscensionIslan (7.98S ; 14.41W ; 30m)

Mongu (15.25S ; 23.15E ; 1107m)

Aerosol Optical Depth at 500 nm

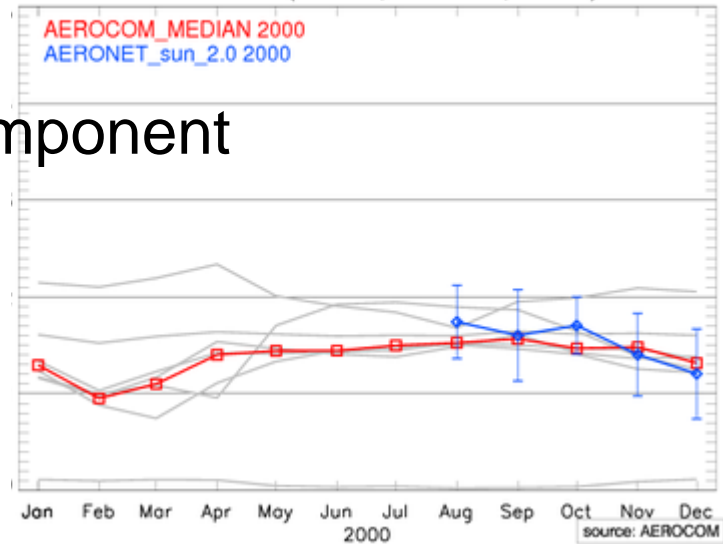

Biomass burning aerosol

Angstroem Component

AltaFloresta (9.87S ; 56.10W ; 277m)

RioBranco (9.96S ; 67.87W ; 212m)

Aerosol Optical Depth at 500 nm

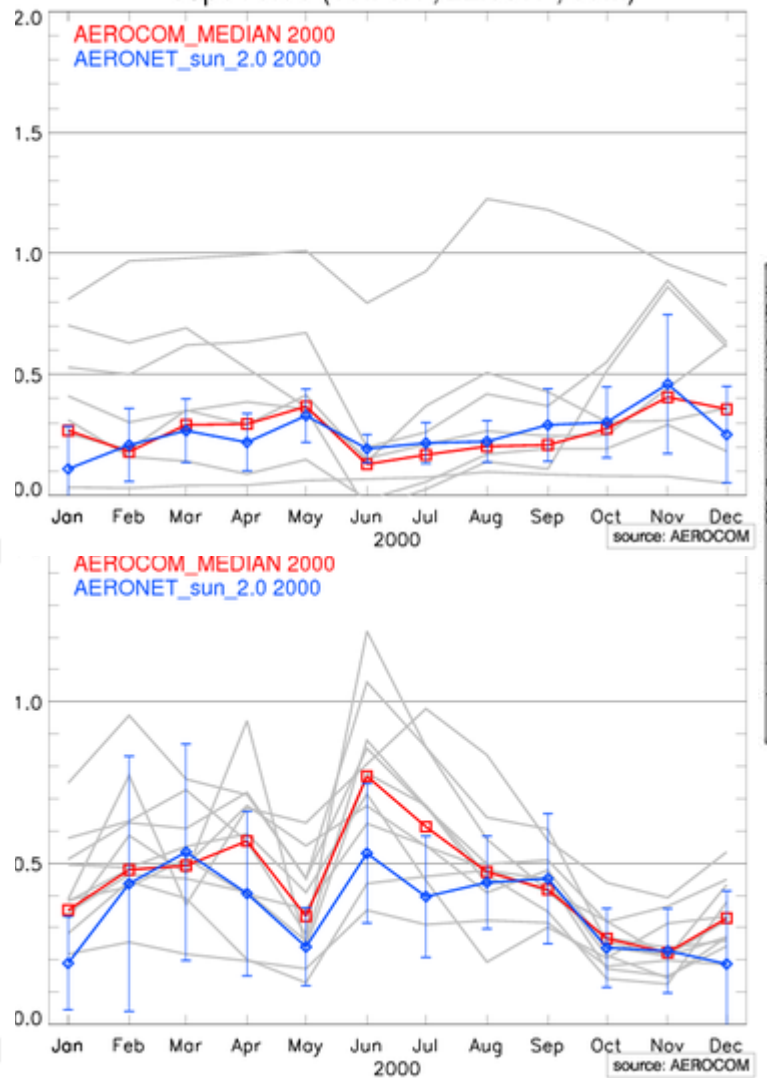

DUST aerosol

Ouagadougou (12.20N ; 1.40W ; 290m)

CapoVerde (16.73N ; 22.93W ; 60m)

DUST and pollution aerosol

Long range transported dust

Angstroem Component

Aerosol Optical Depth at 500 nm

North American aerosol

Angstroem Component

Aerosol Optical Depth at 500 nm

California Coast / Inland

Asian Dust & pollution aerosol

AeroCom

Dalanzadgad (43.58N ; 104.42E ; 1470m)

NCUTaiwan (24.97N ; 121.19E ; 171m)

Tahiti (17.58S ; 149.61W ; 98m)

Outlook

- Complete catalogues with new data sets
- Evaluate use of statistics
- Maintain aerocom server
- Bundle idl tools for other users and stand-alone benchmark tests

What we can do with scoring

- Show model progress
- Find systematic errors within/across models
- Get credit
- Check impact of new parameterisation
- Identify models fit for purpose
