

Trends in concentrations of aerosols from 1850 until present

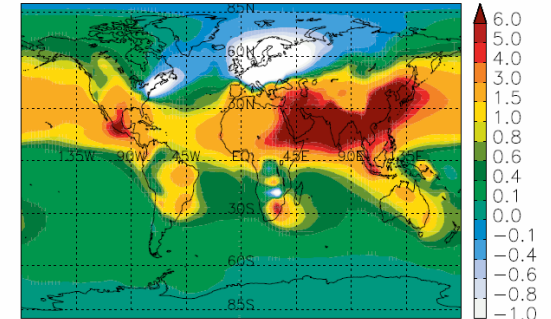

R.B. Skeie, T. Berntsen and G. Myhre,
CICERO

Detailed trends in concentrations of aerosols are calculated, from 1850 until present.

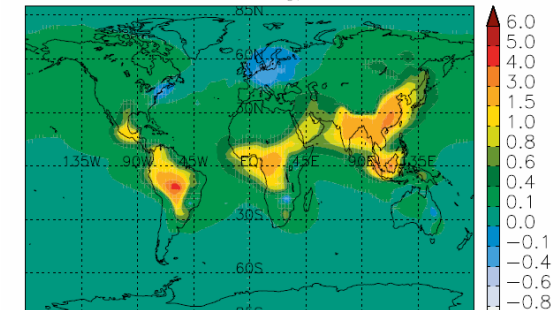

SO_4 , Nitrate, BC, OC and SOA.

- We will calculate RF histories from pre-industrial times until present.
- These histories will be used in a Bayesian approach using a simple climate model and observed temperature change for constraining the climate sensitivity.

Comp S04 ANNUAL mg/m² 2000–1950

SOAER ANNUAL mg/m² 2000–1950

OC ANNUAL mg/m² 2000–1950
