

Global Aerosol Height Distribution from GLAS Satellite Lidar Data and MP Lidar Network

**Jim Spinhirne,
Steve Palm, Judd Welton, Dennis Hlavka and Bill Hart**

Geoscience Laser Altimeter System

Begin full data operation – Oct. 2003

Release of Aerosol Height Product – May 2004

Release Full Aerosol Data Products – Sept. 2004

Micro Pulse Lidar Network

Full time aerosol height profiling at Aeronet sites

Initiation - 2000

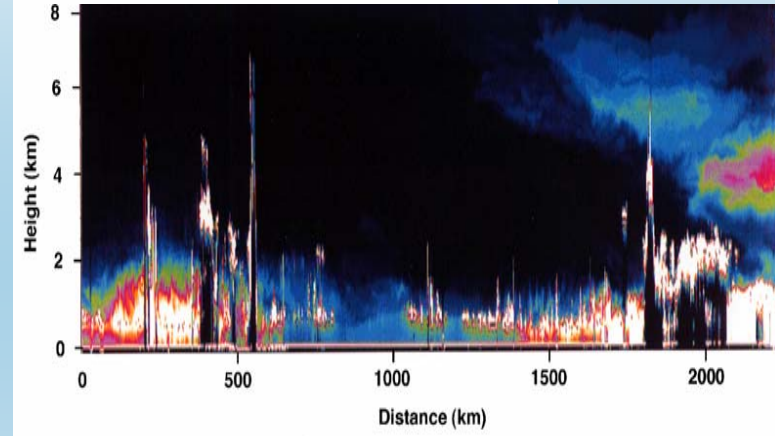

GLOBE - Global Backscatter Experiment

Definition of Space Lidar Requirements

DC-8

- Observe backscatter cross sections below 10^{-7} (1/m-sr) for aerosol transport
- Observe backscatter cross sections up to 10^{-3} for dense aerosol events
- Observe backscatter cross sections over six orders of magnitude including clouds

Menzies, Tratt, Spinhirne and Hlavka - JGR 2002

GLAS Data

October 3-17, 2003

Night Tracks

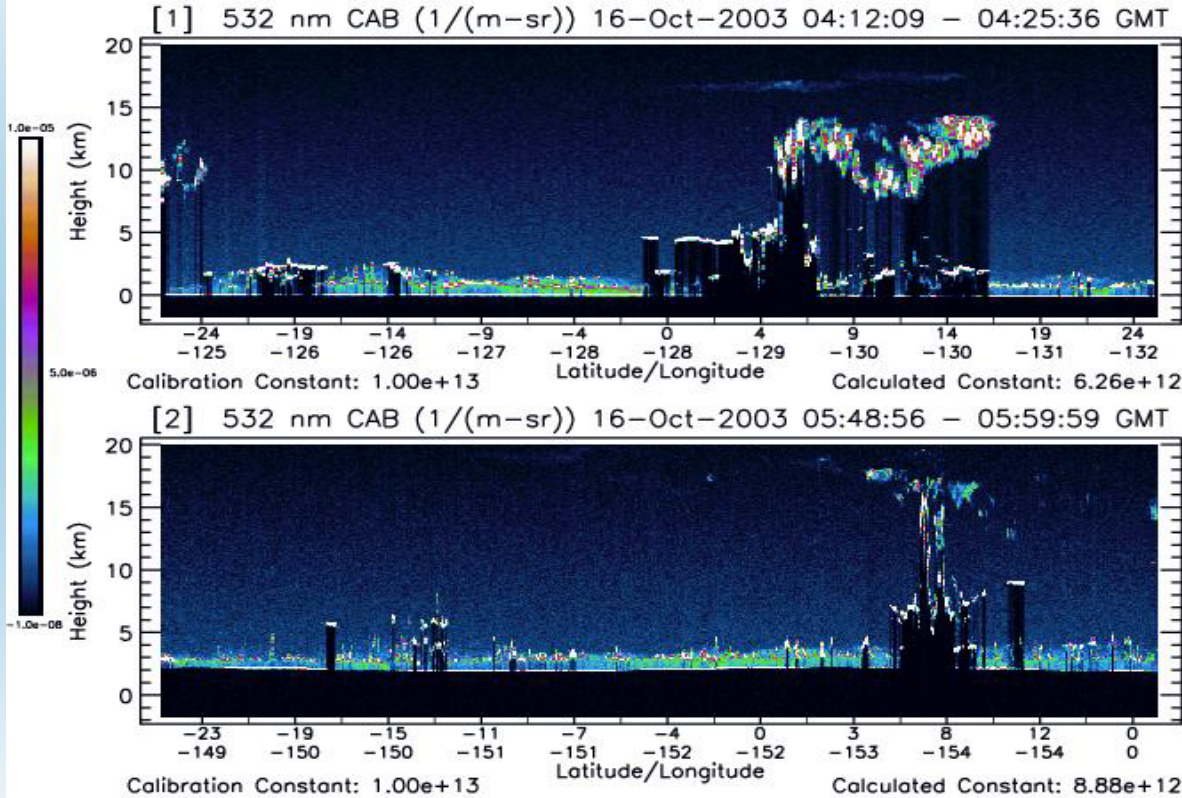

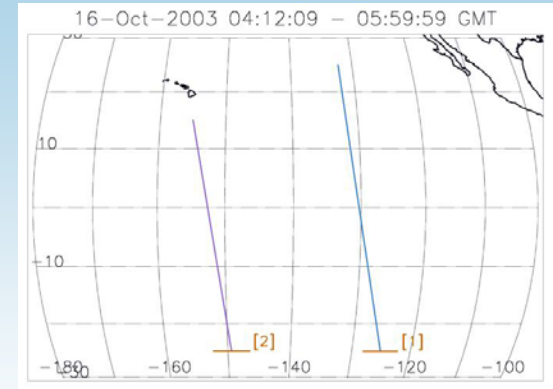

GLAS Detection of Aerosol For Remote Oceanic Regions

Central Pacific

GLAS Measurement Components

Atmospheric Profiles at 1064 and 532 nm

$$S(z) = C E B(z) T_e^2(z) / r^2$$

Aerosol and Thin Cloud:

532 nm – GAPD Photon Counting

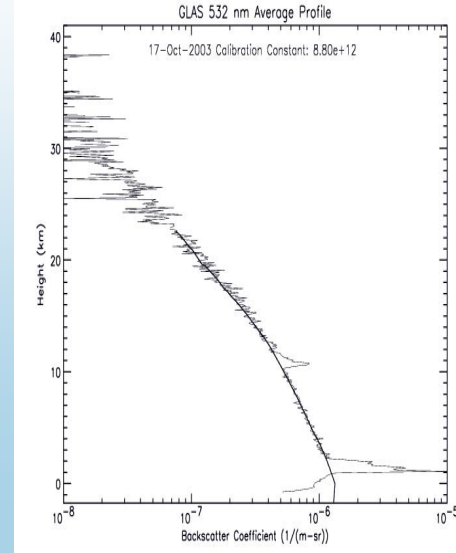

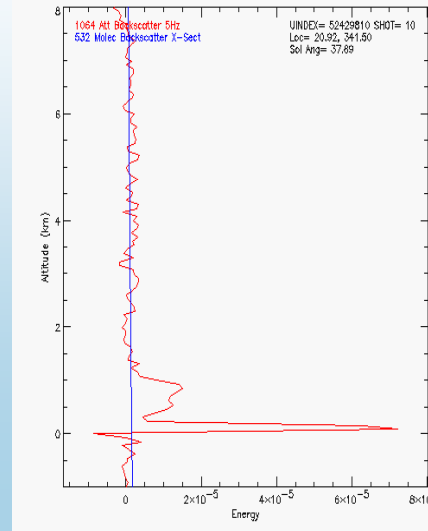

Denser Cloud:

1064 nm – Analog APD

Vertical Resolution – 75 m (20 m)

Horizontal Resolution - ~ 175 m (500m)

Signal Range - -5 to 40 km

Surface Return Pulse at 1064 nm

$$E_s = E_o T_e^2 \rho A / r^2 = C_p \rho T_e^2 (z_o)$$

Surface Pulse Waveform

Surface Pulse Reflectance

Vertical Resolution – 15cm

Signal Range - -100 to 300 m

Solar Background Radiance at 1064 and 532

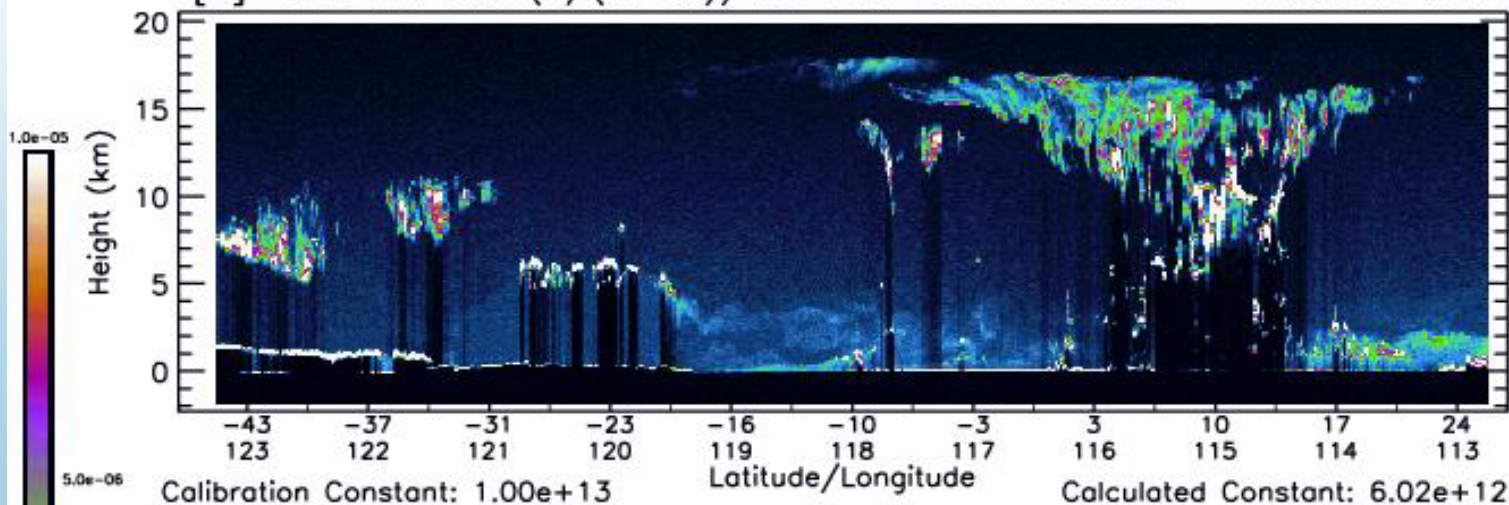

$$P = I \Omega \Delta\lambda A$$

$$S_p = C_b I$$

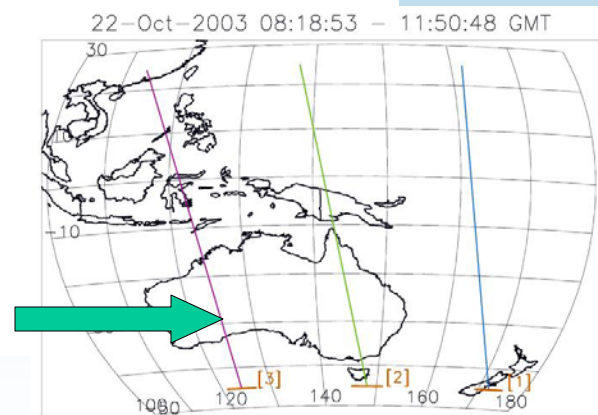

GLAS 532 and 1064 NM CHANNELS

[3] 532 nm CAB ($1/(m-sr)$) 22-Oct-2003 11:31:59 - 11:50:48 GMT

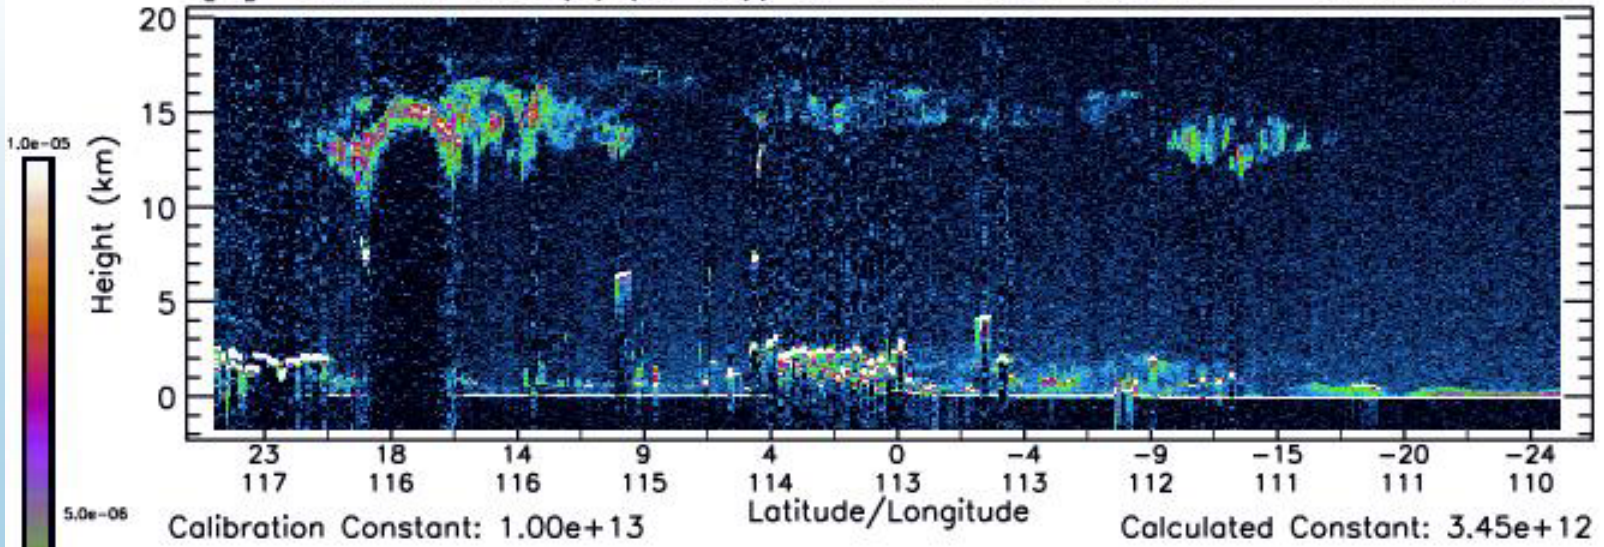

[3] NRB 22-Oct-2003 11:31:59 - 11:50:48 (Seconds 19919 - 21048)

Naval Aerosol Analysis and Prediction System

Optical Depth and Extinction Cross Section Retrieval

1. Forward integration solution with assumed ratio of extinction to backscatter ratio

$$T^2(z) = 1 - 2S' \int (\beta'(z)) dz$$

Basic Approach for Aerosol and Cirrus Layer Optical Depth

- Applied from geo-location based look up table

2. Direct retrieval of extinction optical depth from atmospheric and surface signals

$$T^2(z_0) = I/I_0$$

Aerosol Optical Depth – Molecular Scattering Under Layer

- requires clear layer below aerosol layer
(- cirrus effective ~50% of cases)

Aerosol Optical Depth – Ocean Surface Pulse Intensity

- In development

GSFC MPL Automated Results: May 1-4, 2001 (Prelim Cals Applied)

SUMMARY

Aerosol Height Observations

- **GLAS atmospheric data fully meets the objective of profiling all radiatively significant cloud and aerosol layers.**
- **A laser technical problem has limited good quality measurements to 3 months of existing data.**
- **GLAS data products for 2003 are now in open release to the science community.**

Quick look and data visualization: <http://glo.gsfc.nasa.gov/>

Full Data Access: <http://nsidc.org/daac/>

- **The MPLnet provides full time aerosol height distribution at selected Aeronet ground observation sites**

<http://mplnet.gsfc.nasa.gov/>
