

Giovanni for AEROCOM

Gregory Leptoukh

NASA Goddard Space Flight Center

Outline

- Multi-sensor aerosol measurements:
daily/monthly gridded maps
- Giovanni: online visualization and analysis
- Multi-sensor intercomparison
- Aerosol data fusion
- Comparison with models
- Swath co-location (A-Train)
- Plans for the future

Giovanni Instances

GES-DISC Interactive Online Visualization and Analysis Infrastructure (Giovanni)

- With Giovanni and a few mouse clicks, one can easily obtain information on atmosphere state from around the world
- No need to learn data formats and to retrieve and process data
- Assess various phenomena interactively
- Try various combinations of parameters measured by different instruments
- All the statistical analysis is done via a regular web browser

<http://giovanni.gsfc.nasa.gov/>

Caution: *Giovanni is an exploration tool*

Giovanni capabilities

Basic (one-parameter):

- **Area plot** – averaged or accumulated over any data period for any rectangular area (various map projections)
- **Time plot** – time series averaged over any rectangular area
- **Hovmoller plots** – longitude-time or latitude-time cross sections
- **ASCII output** – for all plot types (can be used with GIS apps)
- **Image animation** – for area plot
- **Vertical profiles**
- **Vertical cross-sections, zonal means**

Beyond basics:

- **Area plot** - geographical intercomparison between two parameters
- **Time plot** - an X-Y time series plot of several parameters
- **Scatter plot of parameters in selected area and time period**
- **Scatter plot of area averaged parameters** - regional (i.e., spatially averaged) relationship between two parameters
- **Temporal correlation map** - relationship between two parameters at each grid point in the selected spatial area
- **Temporal correlation of area averaged parameters** - a single value of the correlation coefficient of a pair of selected parameters
- **Difference plots**
- **Anomaly plots**
- **Acquiring parameter and spatial subsets** in a batch mode through Giovanni

What is Giovanni?

The GES-DISC Interactive Online Visualization and Analysis Infrastructure (Giovanni) is the underlying infrastructure for a growing family of Web interfaces that allows users to analyze gridded data interactively online without having to download any data. Through Giovanni, users are invited to discover and explore our data using sophisticated analyses and visualizations.

In the future, there will be more instances of Giovanni available and we

GIOVANNI NEWS

04.18.2006 OMI Level 2G now available in Giovanni

The OMI Level 2G total column ozone gridded product is now available in OMI Giovanni. This OMI Giovanni (now separated from TOMS Giovanni) allows users to interactively filter by quality flag and viewing zenith angle.

[+ Explore OMI Giovanni](#)

04.05.2006 GPCP Data now available in TOVAS Giovanni

Global Precipitation (GPCP, 1979 - 2005) data are available through TOVAS Giovanni. In addition, TRMM V5 data products have been replaced by TRMM V6. Also, new options have been made available on resultant image page, including "Unit options (mm or inch)" and "Nonlinear color scale".

[+ Explore TOVAS](#)

03.31.2006 New MODIS Aqua SST available in Giovanni

A new version of MODIS Aqua Sea Surface Temperature (SST) has been added to the Ocean Color Time-Series Project Giovanni subsequent to the full dataset reprocessing by the OBP. The data product used in

The A-Train Data Depot Purpose and Goals

Purpose

To be a focal point for researchers interested in learning about and using A-Train constellation data, by providing an integrated set of tools that facilitate/enhance the use of this data

Goals

- Co-locate data from A-Train sensors operationally
- Archive co-located data
- Provide quick exploration vis. Tool - Giovanni
- Provide convenient access to A-Train data...
- Facilitate A-Train data comparison (+ model data)....

So A-Train researchers can concentrate on science!

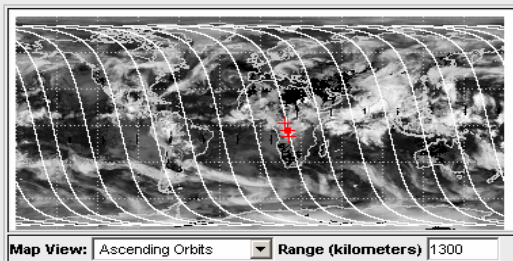

CloudSat, and co-registered MODIS/Aqua, AIRS/Aqua, CALIPSO lidar, and OMI/Aura Atmospheric Measurements

Plots of vertical profiles of clouds, temperature, humidity, cloud and aerosol classification; Horizontal swaths of cloud characteristics and total column aerosols, collocated with CloudSat track; Line over-plots of cloud pressures.

Prototyping PM25 data in Giovanni

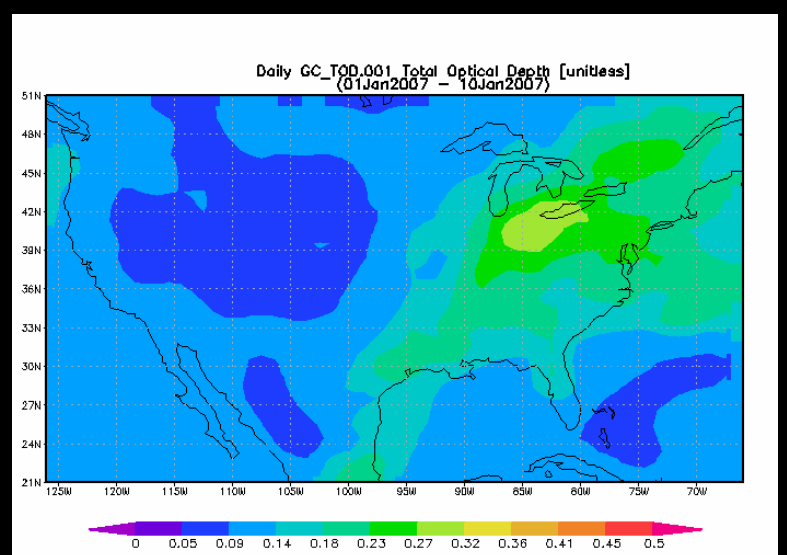

PM2.5 (EPA → DataFed → Giovanni)

Deep Blue MODIS Aerosol Optical Depth

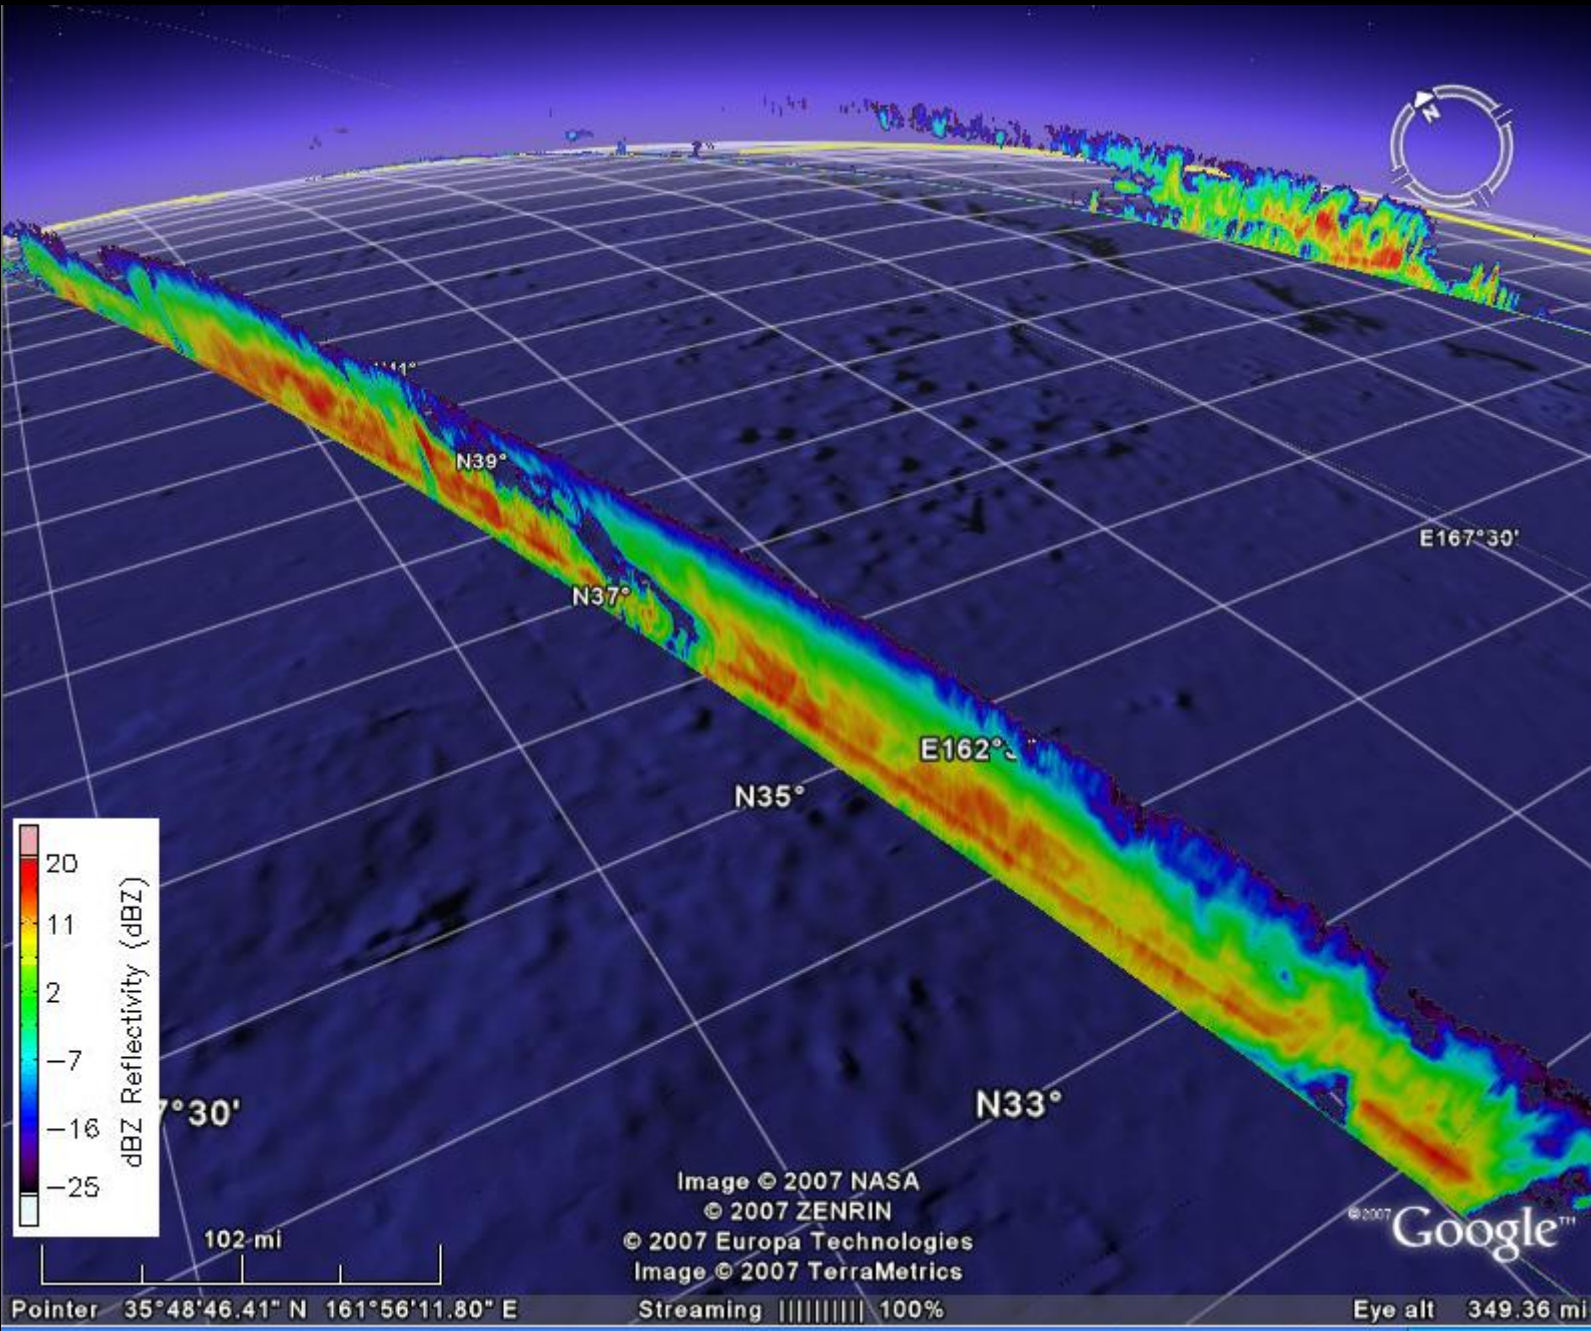

The standard MODIS AOT

GOCART AOT (Goddard → DataFed → Giovanni)

Google Earth

Future plans related to AEROCOM

- Identify and agree on compatibility between model and observational data
- Add GOCART model data
- Create an AEROCOM Giovanni instance
- Add AEROCOM climatology data
- Initiate interoperability between model and RS archives
- Add Taylor diagram to the suite of statistical analysis capabilities
- Add ISCCP data
- Add maps of ground-based observations

Conclusions

- Giovanni is a very convenient online tool for remote sensing data exploration, visualization and analysis
- Giovanni can be very useful for providing easy access to model data along with various statistical intercomparison options
- Giovanni can provide convenient avenue for comparing models with observations
- Recent progress in Data Fusion allows to complement measurements by various sensors and increase spatial coverage
- Giovanni integration with Google Earth provides a convenient way to overlay maps of various parameters along with convenient visualization of vertical structures
